

RS neo

RS Neo offers a beautifully simple route to exciting sailing with a sophisticated rig, lively hull and great user friendliness. Easy to sail, affordable and fun, the RS Neo is perfect for modern sailors.

Best of both worlds

Combining sparkling performance with great handling and exceptional durability, the RS Neo delivers maximum reward for minimum hassle. A powerful, yet versatile rig combined with the durable, trusted RS Comptec PE3 hull means great sailing without the worry and upkeep. The RS Neo is perfect for modern, time-poor sailors who enjoy the thrills of sailing without having to put the hours into mastering a new performance boat, and of course into maintaining one. A quick rig and the Neo is ready to go, in a range of locations and conditions.

Modern and affordable

Constructed from RS Comptec PE3 sandwich, the RS Neo is one of the toughest boats afloat, yet requires almost no maintenance... and the planet will love it too because this material is 100% recyclable. The RS Neo is great value for money. Affordable to purchase with some great options and virtually nothing to maintain.

Designed for hassle-free fun

With an RS Neo you can enjoy a real step up in performance without the intimidating characteristics of more radical designs. The easily driven shape encourages the boat to accelerate, while the high volume hull and wide waterline beam provide security too.

Carbon composite spars are light and responsive so the RS Neo is less effort to rig and has a more dynamic feel afloat – reacting to the gusts, enhancing performance and improving handling.

The radial cut, high denier sail, with powerful and conveniently sited controls can be instantly adjusted to suit your size and the conditions.

Across the bay or around the cans, choose the RS Neo for pure, simple and exciting sailing.
